I am an animal technician in the biotechnology division of the Laboratory of Biometry and Evolutionary Biology.

I contribute to the rearing of various *Drosophila* species in the lab (*Drosophila melanogaster*, *D. simulans*, and *D. suzukii*), as well as *Venturia canescens*.

I carry out a range of experiments on these insects, including longevity monitoring and dissections.

Each year, I participate in field collections of *Venturia canescens* to establish new lab strains and to conduct behavioral experiments on individuals not reared in the laboratory.

I am also responsible for the maintenance and logistical management of the lab's incubator facilities.
