

The Environmental Footprint WG ('GT Empreinte Environnementale' in french) is an internal LBBE working group whose main missions are to establish the laboratory's carbon footprint and propose measures to help reduce it. It also proposes and implements actions to limit the environmental impact of laboratory members in their daily work at the laboratory.

General Assembly, November 14th 2024

During the General Assembly (GA) on Thursday November 14 2024, we presented the LBBE's 2023 CO₂ footprint and then focused on a few sectors: computing, travels, and purchases. We ended the GA by splitting in 3 groups (13, 9, and 7 people) working on ideas to reduce the footprint of computing, lab experiments, and travels.
